Digital-Seller Bookkeeping Summary

This is a bookkeeping summary of your uploaded sales data. It is NOT tax advice and was NOT prepared by a CPA, EA, or other tax professional. It does not determine tax owed or required payments. Confirm tax decisions with a qualified preparer.

Source format detected: Gumroad — pinned PurchaseExportService CSV (supported USD sales only) (gumroad_purchase_export_v2)
Period covered: 2026-01-01 to 2026-01-02
Order line items processed: 2 (of 2 data rows in the file)
Generated: 2026-10-13 03:34

Monthly income summary

Month	Orders	Gross Sales	Discounts	Refunds	Net Revenue	Sales Tax (info only)	Marketplace Fees	Net After Fees
Jan 2026	2	$29.99	$0.00	$0.00	$29.99	$0.00	$3.49	$26.50
TOTAL	2	$29.99	$0.00	$0.00	$29.99	$0.00	$3.49	$26.50

Sales tax collected is displayed separately from the export revenue summary. Verify the export tax treatment and reporting requirements with your preparer. Net After Fees is not total business profit.

Income and fee inputs

These are export income and fee inputs for discussion with your preparer, not a completed Schedule C or a determination of taxable income. This export omits other business income and expenses such as inventory, software, home office and mileage. It does not determine deductibility or the correct tax-form line for any item.

Export input	Amount	Scope
Revenue after export discounts/refunds	$29.99	Net Revenue in this export
Marketplace/platform fees	$3.49	Export fee data

Hypothetical reserve illustrations

The amounts below are arithmetic illustrations, not estimated tax payments, amounts owed, or recommended savings. The fixed 10%, 19% and 28% scenario rates are arbitrary assumptions, not verified tax brackets or a range for your situation. No scenario is preferred.

Input N is this export's Net After Fees. Simplified SE-based arithmetic computes H = MAX(N, 0) x 0.9235 x 0.153, then B = MAX(N - 0.5 x H, 0). Each illustration is H + B x its scenario rate. These legacy constants and period-by-period calculations are not a complete or current-year tax model. A zero illustration does not establish zero tax liability.

Quarter	Net After Fees	Scenario A 10% assumption	Scenario B 19% assumption	Scenario C 28% assumption
Q1 2026 (Jan-Mar)	$26.50	$6.21	$8.42	$10.64

No illustration is shown for periods with missing or partial fee data. Even complete export fees do not make Net After Fees a measure of total business profit or taxable income.

Excluded from the illustrations

- Annual income and expense aggregation, annual thresholds and losses across periods
- Social Security wage limits and coordination with wages from employment
- Additional Medicare tax and other tax adjustments
- Filing status, other income, federal/state rules, deductions and credits
- Withholding, prior payments, payment timing and estimated-payment rules
- Expenses outside the export and whether any particular cost is deductible

The scenario rates and simplified formula are explicit assumptions. The excluded factors can materially change tax obligations. Use this report to organize export data; obtain a separate calculation using complete records before making tax decisions.
